

ABSTRACT OF DISCLOSURE

A resin molded article having excellent mechanical properties, heat resistance, light weight, thermoplasticity, and recyclability, which gives no adverse effects to the environment after its disposal is provided. The resin molded article is produced by molding and crystallizing a composition comprising a crystallizable, biodegradable plastic resin containing a polylactic acid as its main component, a glass fiber, and a hollow glass balloon which has been surface treated with a coupling agent. The article has a heat distortion temperature of at least 80°C and a density of up to 1.2 g/cm³.
